# Smart Connect

Danlaw's Smart Connect is a product of our DataLogger Ecosystem, serving our customers with millions of devices and billions of miles. Our products give you the opportunity to engage with your customers in their vehicles and turn every ride into a story. Our Ecosystem consists of our award winning DataLogger, Gateway, Smart Connect, and Vision products.

Danlaw's Smart Connect comprises of two product offerings: The Smart Connect App and the Smart Connect SDK.

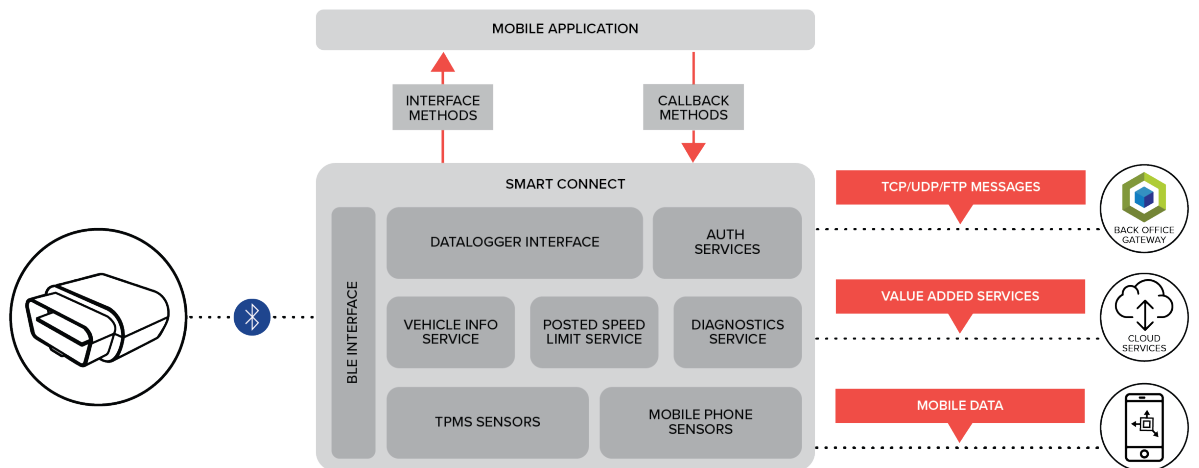

Smart Connect App

The Danlaw Smart Connect App is a ready to use mobile application for Android and iOS. This mobile app allows the Danlaw DataLogger to send data to the backend using Bluetooth connectivity from a smartphone. The app serves as a pass-through and sends vehicle data from the DataLogger device to the Gateway in the backend.

Smart Connect SDK

The Smart Connect SDK serves as a high performance mobile SDK used to develop Android & iOS apps for smartphones. Smart Connect SDK enables secure communication between the DataLogger, mobile applications, BLE based peripherals/sensors, mobile phone sensors, and other third-party web services. It is used to efficiently connect, collect data, and manage DataLogger devices from mobile phones. Smart Connect SDK provides interfaces to communicate with the DataLogger to read vehicle data or subscribe for vehicle events. The SDK can also act as a pass-through for the DataLogger to transfer data to the Gateway, which can be offered as a service or installed in your environment.
